

# Research, monitoring and evaluation

A TETRA TECH COMPANY

Coffey's Research, Monitoring and Evaluation (RME) Practice works with donors, commonwealth and state governments and NGOs, as well as universities, foundations and private business, to help them understand and measure the impact of their work and promote results-based management and decision making.

Our team designs, manages and delivers complex, large-scale research projects across the world. Specialising in high-quality independent evaluations and impact assessments, we equip organisations and programs with robust monitoring and evaluation (M&E) systems. Working in close collaboration with other practices within Coffey, we ensure that rigorous M&E is integrated into everything Coffey delivers.

From our research, monitoring and evaluation hubs in Adelaide, London and Washington DC, we service a wide range of clients in developed and developing countries in the Pacific, Asia, the Middle East, Africa and Europe. Our research, monitoring and evaluation projects are delivered across economic growth, private sector development, governance, security and justice, and human and social development.

Our technical expertise ensures that evaluation is integrated into each stage of the project lifecycle. As part of our utility-focused approach we work collaboratively with a wide range of stakeholders and partners in order to understand what type of evidence is required, by whom, when and for what use. As a result, we are able to set up M&E systems to collect the right data, at the right time, for the right purpose. Similarly, this approach ensures that our evaluation designs and research methodologies are appropriate and capable of producing evidence that is reliable, meaningful and useful.

**Coffey's Asia Pacific RME Practice has seven in-house M&E Specialists who bring together a unique blend of expertise ranging from theory of change, social research, econometric analysis and survey design to GIS mapping and database management. Our Asia Pacific Practice works closely with a core group of associates with specific technical and sectoral expertise to deliver defensible evidence and useful recommendations to improve aid impact through better policy, programming and management.**

## Expertise

- Theory of change
- Social research
- Econometric analysis
- Regression analysis
- Survey design
- GIS mapping
- Database management
- Problem analysis
- System mapping

## Products

- Project and program design
- Experimental and quasi-experimental impact evaluations
- Ex-ante impact evaluations
- Formative process evaluation
- Longitudinal studies
- Meta-evaluations
- Evaluation management

## Results

- Defensible evidence of impact
- Evidence-based decision making
- Results-based policy

# Applying our technical expertise across a range of sectors

## Human development

- **DFAT** Independent Program Review, Basic Education Sector Transformation (BEST), Philippines
- **Department of Jobs** Empowering Youth Evaluation, Department of Jobs and Small Business, Australia
- **World Bank** Process evaluation: Utilizing the Kalahi-CIDSS Community-Driven Development Approach to Improve Access to Early Childhood Development and Basic Education, Philippines
- **RDIN/ACFID** Sector Snapshot of Research communication and uptake

## Civil society

- **ODE** Evaluation of the Australia NGO Cooperation Program, Global
